

# Kindergarten Education Scheme Facilities for Experiential Learning Activities Display Form

Lei Yue Mun Methodist Kindergarten

Name of School

2023-2024

School Year

K3

Grade Level

## Name of Activity

I love nature "Track Eco Tour"

## Objective(s)

- Understand the relationship between nature and us
- Understand the common trees and insects in Hong Kong
- Explore and experience different species of nature through different senses
- Carry out beach clean-up activities, experience the action of protecting nature, and use actions to promote the message of protecting nature.
- Feel the nature and inspire Zentangle artistic creativity
- Cultivate children's attitude of cherishing nature, protecting the environment and protecting ecology

## Brief Descriptions:

- In track eco-tour activities, children go on eco-tours with eco-guides. The tour guide introduces various ecological species at the nature education center, such as wetlands, tree species (pine trees, orange trees, agarwood trees), animals and insects, and introduces different characteristics and life patterns.
- The tour guide invites children to use different senses to explore, such as wrapping their hands around the trunk to feel the hugeness of the trunk; use our nose to smell the fragrance of orange tree leaves, and use our eyes to observe the patterns of butterflies, etc.; feel the breeze of nature with your skin and listen to the sounds of nature such as birds and insects with your ears, and ask them to share their feelings.

- After visiting different exhibition halls (Insect Hall, Shell Hall, Agricultural Hall, etc.) and learning more knowledge about nature, children take photos of species characteristics in nature and bring out the many rare and unique species in nature. We should know how to cherish and do a good job in conservation so as not to affect the beautiful nature and bring out the important message of caring for the environment. They are also asked to share their most profound experiences during the eco-tour as related extension activities.
- After tracking the eco-tour activities, we use the activity photos after returning to school to review and share them with the children. We observe together and discover that there are different patterns and unique places on different species, insects, etc. Inspire children to join in art, observe what they see, draw beautiful images with simple and repetitive patterns and lines, and create unique works of nature art (Zentangle).

### Record of Activity (E.g. Children's Work / Photos / Videos of the activity)
